

# Intern WALL OF FAME

**Megan Riley (Biology, Senior)**  
**Clinical Aide Intern**  
**North County Spine + Sports**

I have learned so much from my internship thus far. I have learned much more about the spinal anatomy. I have also learned about different exercise prescriptions that aid in recovery of certain injuries and/or surgical procedures. I have been able to gain a more thorough knowledge of doctor-patient interaction. I have learned how to take a patient history as well. This internship will help me reach my career goals because it has allowed me to become accustomed to being in a clinical environment. I want to go on to be a physician assistant. Therefore, all of the hours of direct patient contact that I have completed will allow me to be more experienced when I enter a clinical setting as a professional. My internship experience can easily be rated as excellent. I have not yet completed my internship, therefore no position has been offered. I would definitely recommend interning as North County Spine and Sports to other students. It is an incredibly warm and welcoming environment and the experience is very educational.

I would tell all students that the staff at the Career Development Office is extremely helpful and personable. I was able to quickly find an internship through working with Tracy.
